

Definition of Done (DoD)

- A Character Generator should be implemented that generates the data for 5 characters, along with statistics
- The communication between Server and Connectivity should be established using sockets and JSON format to send and receive data
- The server should have protocols for creating the lobby, joining a lobby, starting the game, setting the Dungeon Master and for sending back the number of lobbies available
- A database should be built, where information about lobbies, characters and users should be stored
